FM-1 skin: blank template

Print at 100% / Actual size, never 'fit to page'. Check the square below is 50 mm on both sides.
Solid lines are the cuts: the outline, a 10 mm hole for each knob, the screen and each tray of buttons.
The dashed line is the edge of the case. Cut one in plain paper and try it on your FM-1 before any vinyl.

Measured from two photos of one FM-1: the case is 161.5 x 96.5 mm. Yours may differ a little, so try the paper first.
Holes clear each tray by 0.75 mm and each knob by 1.25 mm all round. The skin stops 1.5 mm in from the case edge.
A skin covers the eight knob names printed on the case, shown here in grey, so a design has to print them again.
